## DOOR TRACK GUIDE

# DOOR TRACK SELECTION GUIDE

The following points should help you select the appropriate door track system for your needs.

Door mounted: \_\_\_\_\_ Door width: \_\_\_\_\_

Wall or Top mounted: \_\_\_\_\_ Door thickness: \_\_\_\_\_ Number of doors: \_\_\_\_\_

Door type: Sliding / Folding : Internal / Wardrobe / Cupboard / Cabinet

Will your track be wall mounted or top mounted? *Be aware of available fixing points/studs and any obstructions before committing to a fixing type.*

Is your doorway a high traffic area subject to constant use? *Upgrading to an enclosed track or a heavier system can greatly increase the operating life of your door track.*

Want to keep the noise to a minimum - kids bedroom, ensuite? *Enclosed aluminium tracks are far less noisy than open steel tracks and often run much more smoothly.*

Is humidity or dust a concern in your door location? *Enclosed tracks offer a greater resistance to the build up of dirt and dust, thus increasing the operating life of your door track.*

Do you simply want a track that looks good? *Enclosed tracks are much more appealing and may be painted to suit decor, or you may prefer a pelmeted wall fix track.*

**ARROW**  
Sliding Internal Door

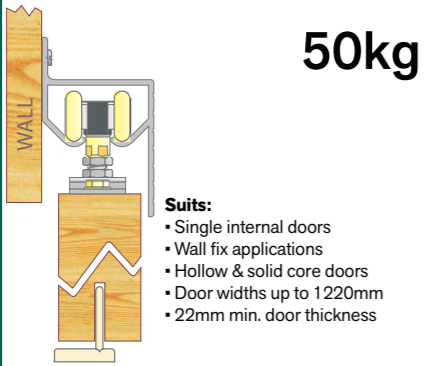

**30kg**

**Suits:**

- Single internal doors
- Wall fix application
- Hollow core doors
- Door widths up to 915mm
- 25mm min. door thickness

**FORERUNNER PELMET**  
Sliding Internal Doors

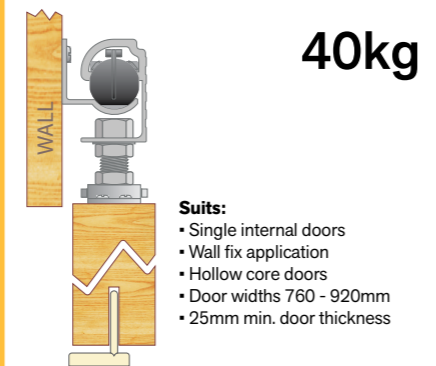

**50kg**

**Suits:**

- Single internal doors
- Wall fix applications
- Hollow & solid core doors
