Ambient Light
Technology
(A.L.T)

Have you ever seen a skylight in a high-rise apartment? Perhaps only on the top floor...

Using illume Ambient Light Technology (A.L.T), the Skylight Alternative illuminates dark, gloomy areas, where under normal circumstances a traditional skylight cannot be fitted.

This innovative solution opens up an entire new range of possibilities to renovators who can now create beautiful, dynamically lit areas in the darker parts of your home or space.

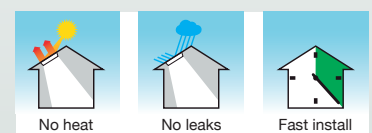

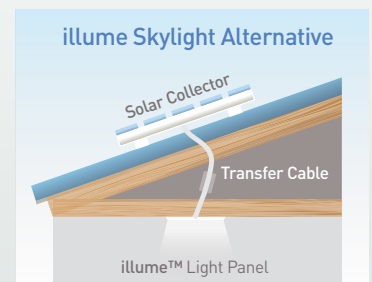

Surface-Mount Skylight Alternative

illume surface-mount Skylight Alternative is easy to install almost anywhere- in any room on any level without the need for a light shaft, flexible tube or large roof cavity.

Our surface-mount models offer the ability to include dynamic lighting into tricky situations where a conventional skylight cannot be fitted such as timber and tin ceilings. Also, illume surface-mount models do not interfere with insulation and electrical cabling.

ADVANTAGES OF AN ILLUME SYSTEM

- ✓ Does not affect insulation (R-value) or noise rating (NCR)
- ✓ Works without a light shaft or flexi-tube
- ✓ Can be installed almost anywhere
- ✓ Suitable for tile or metal deck roofs
- ✓ Fully sealed unit – will not leak or collect bugs
- ✓ Does not transfer UV, heat or noise indoors
- ✓ No batteries or mains power required

Code	Panel Size	Mount Type	Lumens	Form Factor	Profile
